

Did You Know...

Buck's new EcoLite™ knives are eco-friendly, lightweight, tough and affordable

EcoLite is Buck's new approach to providing a cluster of advanced knife features, available now in a growing range of models. The handles are made of 100% post-consumer recycled waste paper called PaperStone™, the greenest material you can find. Best of all, they are much more than eco-friendly!

- EcoLite knives are stronger, more rugged and withstand moisture, and extreme heat or cold. They take general in-use abuse and come back for more. Yet, with this strength and toughness, they are much lighter weight. And very affordable.
- "We understand the importance of integrating eco-friendly materials into our products, and we are enthusiastic about our major step forward with the use of PaperStone for our handles," said CJ Buck, president.
- First used on handles for Buck's Metro™, with positive results, it's now the key to the expanding line of EcoLites, including 110 and 112 EcoLites. They have exactly the same great hollow-ground clip blades as the famous Folding Hunter and Ranger, and the same reliable positive-action locking system that has stood the test of time for nearly half a century. Both come in a heavy-duty nylon sheath. There are also two of the popular Vantage knives made with the PaperStone handle. All are backed by Buck's famous Forever Warranty, and in keeping with Buck's American Commitment, they are all made in the USA.
